

ALUFAST ALUMINIUM GLASS FABRICATORS SPECIALISTS & FOLDING DOOR SPECIALISTS

Alufast CC was established in January 1999, it's co-founder, Terence Wright, has the benefit of more than 40 years experience within the Aluminium Industry in regard to specialised products and designs.

We manufacture and install a diverse range of products to standard industry specifications. However, we differ from many other manufacturers in that we have the flexibility of manufacturing process so that the client benefits by having the particular style of product, and finish/colour, to suit their property and budget. We are always pleased to demonstrate our range of products and will be willing to arrange a free, no obligation consultation to discuss your requirements.

Our product range includes doors and windows, entrance facades, double volume glazing, shop fronts, showers, skylights, aluminium air vents, louvres, radar doors, security cubicles, stack-away folding doors, bay windows and balustrades, but this is by no means our comprehensive list. A large percentage of the products we manufacture are to architect and/or owner specification and design.

While we are based in Johannesburg, we service the entire Gauteng Province, the North West Province, the Free State, Kwa-Zulu Natal, the Cape Province and have supplied clients in Ghana and other African Countries

All our products and materials comply with the National Industry Standards and Regulations, ensuring that our customers can have complete peace of mind and the total confidence in their purchase.

Our products & installations carry a one year guarantee, and any problems which may arise with regards to your installation, however big or small, will be responded to promptly and efficiently, simply telephone our offices.

Our clients financial needs are also catered for, as we are more than willing to stagger production and installation time of the goods to facilitate budgets and payments.

We are members of both SAGGA and AAMSA, the National Regulators of Glazing and Aluminium Standards.
